

Paxlovid Prescribing

Ensuring a safe, coordinated and positive patient journey

Patient tests positive for COVID-19

Patient visits CVS.com or the CVS Pharmacy[®] app and **answers eligibility questions**

CVS Pharmacy digital screener determines initial **patient eligibility**

Patient schedules appointment to speak to CVS Pharmacist by phone

Pharmacist calls patient for clinical assessment

Pharmacist performs clinical eligibility assessment including use of electronic health record (EHR) to review patient's health history and lab values

If patient is eligible, **pharmacist prescribes and fills Paxlovid** and alerts patient when ready for pick-up
If patient is not eligible, pharmacist refers them to alternate care

Pharmacist logs interaction in patient's EHR to keep primary care provider informed
